

Ilmatar Energy Announces New Wind Farm, Adding New Clean Energy to the Grid

Google agrees to purchase 125 MW of electricity produced in 211,4 MW Piiparinmäki wind farm from Ilmatar Energy, a joint venture of Omnes Capital-managed Capenergie 3 and Ilmatar Windpower plc.

Helsinki, September 20, 2019 — Ilmatar Energy today announced that it has reached an agreement with Google that the technology company will purchase 125 MW of electricity from the Piiparinmäki wind farm to be built in Kainuu region of Finland by Ilmatar Energy. The project will bring 211 MW of new green energy to the Finnish power grid.

Google recently [announced](#) that it has made its largest ever purchase of renewable energy, totalling more than \$2 billion in new energy infrastructure produced by solar panels and wind turbines to be located around the world.

Piiparinmäki wind farm will be built 2019 – 2021 and will start production already 2020.

”Ilmatar is one of the pioneers of the Finnish wind power industry and we are very delighted to have reached this agreement with Google. Such an agreement also highlights how large technology companies are ready to commit to wind power, which is not only a clean but also a cost-effective form of energy production that enables investments in Finnish infrastructure. Investing in new renewable and clean energy is the only way we can reach our common climate goals.” says Kalle Pykälä, Chairman and Co-Founder of Ilmatar Windpower.

“Sustainability has been one of Google’s core values from our earliest days, and a cornerstone of our related efforts is our commitment to clean energy,” said Neha Palmer, Director of Operations, Google. “Today’s announcement will add new renewable energy to the grids where we consume it, creating new construction jobs and making clean power accessible to nearby communities.”
